

# AGRI PANZER®

EXTENDING DURABILITY OF WEAR PARTS

## The wear solution for the agricultural sector

For more than 20 years, Geurts van Kessel Hardfacing has been a specialist in wear-resistant layers for the recycling industry (green waste, metal, and other materials). But in agriculture too, wear caused by soil contact is a common challenge.

Especially for this sector, Geurts van Kessel has developed Agri-Panzer.

Agri-Panzer is highly suitable for agricultural machines and equipment. It is a revolutionary solution that enables farmers to work longer without interruptions for maintenance or part replacements.

## Making agricultural machines more sustainable. That's what we do.

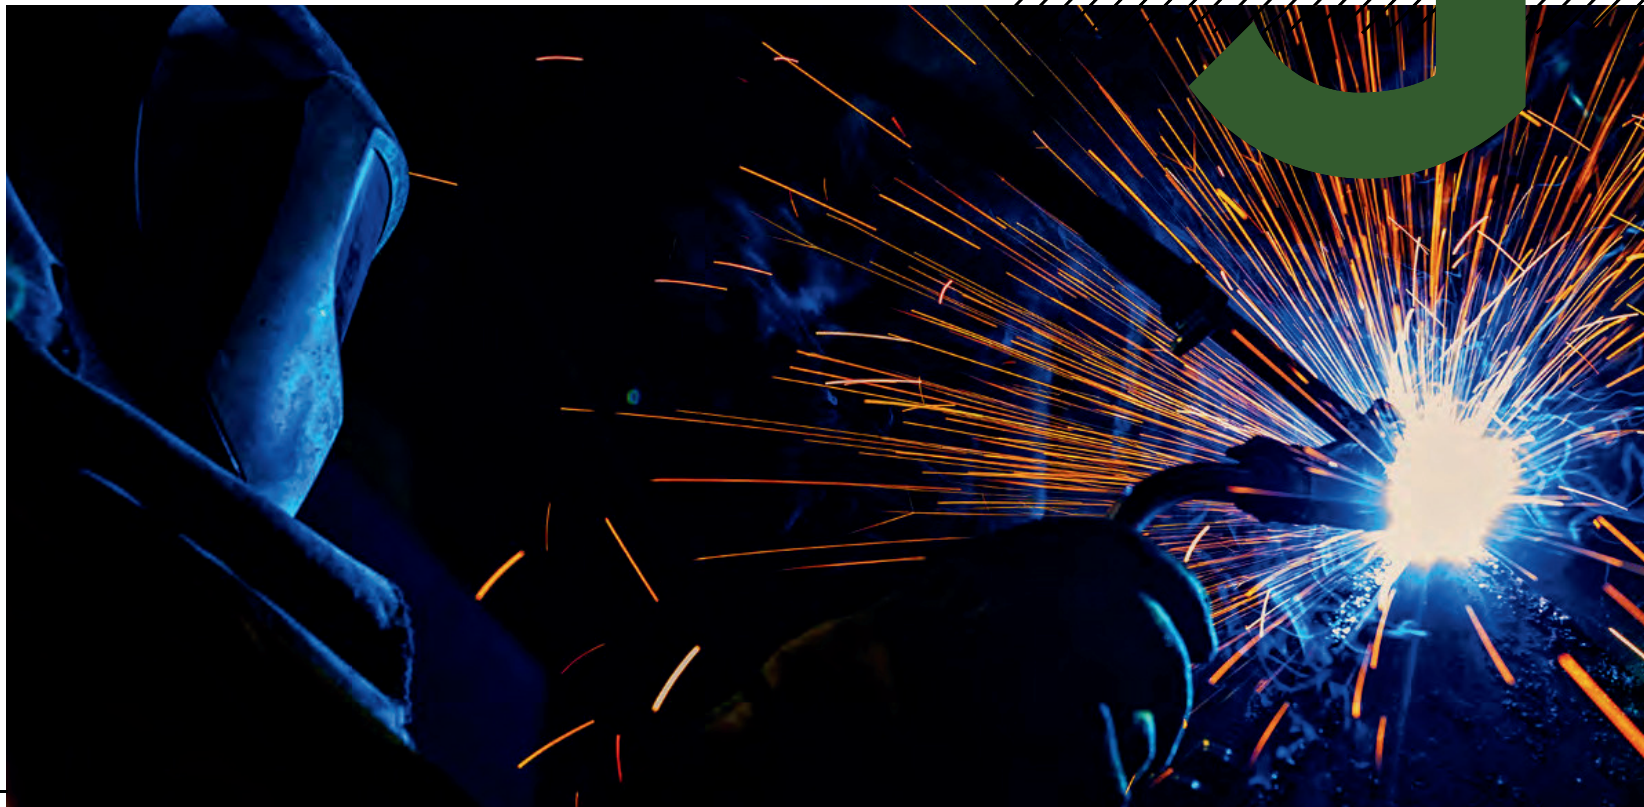

In a well-equipped workshop in the Netherlands, more than 20 dedicated employees work on preventing wear on machines and components from various industries.

Our mission is clear: We are determined to transform the agricultural sector by demonstrably improving efficiency, reducing costs, and increasing sustainability. As a result, fleet costs decrease, profitability rises, and job satisfaction grows

## Benefits of Agri-Panzer

With the Agri-Panzer® from Geurts van Kessel Hardfacing, today's farmer can remain productive for longer. To minimize the effects of wear on machines and their components, Geurts van Kessel Hardfacing developed CGP® as a solution. CGP stands for Carbide Granulate Protection. Thanks to our innovative wear layer, output remains consistent for much longer during various soil cultivation processes.

- Efficiency enhancing
- Cost-saving
- sustainable

- 
- With Agri-panzer, every farmer can work longer- and throughout the year – do their work without interruptions for maintenance or part replacement or failure.
  - Agri-Panzer® provides cost savings on fuel and parts
  - Uninterrupted performance of work leads to lower fuel consumption. In addition, the purchase of replacement parts decreases significantly.
  - Agri-Panzer® contributes to a better environment.
  - Less replacement of parts is not only good for the wallet, but also for the environment. The production and waste of parts are thereby reduced to the absolute minimum.

#### **The versatile wear solution**

Agri-Panzer can be flexibly applied to a wide range of machine wear parts used by farmers. Agri-Panzer is also suitable for various products of agri-technicians, service engineers, and dealers of agricultural machinery and equipment.

#### **Customization and refurbishment.**

The process of applying wear-resistant layers is automated and robotized. As a result, large volumes are no problem at all. In addition, experienced and highly skilled welders manually apply wear layers for small series and large components, and we also provide refurbishment of worn parts.

#### **Challenge us**

Are you dealing with unwanted wear, excessive maintenance, or high costs for your machine and wear parts? Schedule a coffee moment with us. +31 (0)412 25 00 35 info@agri-panzer.nl
