

# GEURTS VAN KESSEL HARDFACING

## EXTENDING DURABILITY OF WEAR PARTS

### Specialists in hardfacing. That's who we are.

We are known for our unique, sometimes experimental welding methods and see it as a challenge to continuously improve ourselves. The techniques we use have been developed in-house and are constantly refined.

We are especially known for our CGP® layer, a hardfacing that incorporates tungsten carbide granulate. But we can also apply other layers – with the right mix of materials and techniques, we make the impossible possible.

### Making machines more sustainable. That's what we do.

By applying wear-resistant layers, we are not only able to extend the lifetime of machine parts, but we can also refurbish used machine components. These parts can then be reused and are often even more wear-resistant than they were originally.

The result: less downtime, lower fuel consumption, and reduced costs.

### Our wear layers have proven their added value in various industries:

- Recycling industry
- Offshore and dredging industry
- Asphalt and concrete industry
- Agriculture and agri-technology

### Challenge us

Are you dealing with unwanted wear, excessive maintenance, or high costs for your machine and wear parts? Schedule an appointment with us.
